

## **HERMES Unveils Ground-breaking Dangerous Goods Module**

**Date: 28<sup>th</sup> April 2011**

HERMES are the first Cargo Management System provider to include a Dangerous Goods Module within the system embedding IATA industry standard codes and practices. One of the many benefits of this innovation is the ability for relevant staff to receive instant electronic access to the full process of documents and warehouse procedures to eliminate errors small or large.

Whilst today's press focus on the dangers around passenger security, almost every aircraft in the sky will carry some kind of dangerous substance. To ensure the safety of all personnel who handle and fly with cargo containing dangerous goods there are stringent rules to which they need to adhere.

This information is currently stored within the vast IATA Dangerous Goods manual, providing users with UN/ID - PSNs, Packing Groups, State and Operator variations, Radioactive and all text values that describe every conceivable item. This level of detail can now be held within the Dangerous Goods module of the HERMES system, using the data provided by DGM - IATA's accredited Dangerous Goods Service Provider.

The HERMES DGR module will assist the DGR certified user by ensuring the relevant regulations are complied with, negating the need for searching through huge DGR manuals. With updates to Dangerous Goods rulings being made periodically, the HERMES software will automatically check and search for updates every two hours, delivering the most current information at all times.
